About Glass Protection Solutions

Glass Protection Solutions technicians install a micro-thin transparent window laminate which turns regular glass windows into barriers that can resist the force of several blows, high impact projectiles, violent weather and bombs.

Glass Protection Solutions works with you

Our approach to glass protection is working with our customers to recommend and install security laminates that meet their threat risk level. An International Window Film Association (IWFA) accredited company, Glass Protection Solutions is dedicated to quality workmanship and has a knowledgeable team whose expertise in the window film industry will ensure you receive the best security solution.

Our Security Solution

Glass Protection Solutions is committed to protecting people both on the inside of buildings and outside passersby against the threats of broken and flying glass. We assist your needs by developing a security solution to help you reduce that threat. Security laminates can be applied to both new construction and existing glass windows and doors. When retrofitting existing glass, security laminates are the single most cost-effective approach to providing resistance against the consequences of break and enters, forced entry attacks, high impact projectiles and explosive blasts.

Guaranteed Quality Installation

Manufacturer trained and IWFA accredited technicians will apply the laminate to the interior side of the glass of your existing windows. More importantly, the window films come with manufacturers' warranty* and a 2 year installation warranty.

* Varies between manufacturers.
Commercial: 8 to 12 years – Residential: lifetime

Residential Protection

2 out of 3 break-ins occur through glass – the easiest point of entry. Safety and Security Laminates work as an integral element for maximum glass strength. The security film is designed to hold glass fragments together (even when broken) like an invisible shield, protecting your household with increased resistance against thefts, vandalism, accidents and violent weather conditions. In fact, the security laminates can be applied to any home glass surface: windows, patio doors, basement windows, glass door inserts and side-lights.

Commercial Protection

Reinforcing glass surfaces and securing the windows at your place of business is an entirely affordable investment. Accidental injuries from broken glass lead to expensive repercussions and a bad reputation. Stolen assets, damages to property and shattered windows are also expensive to replace and affect your business operations and insurance premiums. With the advanced technology and high optical clarity security laminates offer, glass surfaces in any commercial or retail setting can retain the visual appeal without compromising the safety and security of people and property.

UV Protection

We offer laminates that are highly effective at reducing harmful UV rays, unwanted heat and glare that fade the colour of your curtains, furniture, and floors. The products we offer help keep your furnishings looking good longer by blocking up to 99 percent of the damaging UV rays that can fade and deteriorate everything from draperies and wood furniture to carpeting and upholstery.

Testing

High Force impact and bomb blast damage from potential terrorist threats has created a need for a new higher standard to mitigate flying glass hazards from blast loads. Window Film Manufacturers have conducted extensive third-party testing to demonstrate the performance of their safety and security films against bomb blast loads. Security Films meet a variety of the following test standards:

- BMAG (Blast Mitigation Action Group) – Level 1, 2 & 3
- GSA (Government Services Administration) – Level 1 & 2
- ULC (Underwriters Laboratory Canada)
 - Burglary Resistance
- CPSC (Consumer Product Safety Commission)
 - Burglary Resistance
- ASTM (American Society for Testing Materials)
 - E84 Surface Burning and Flame Spread
- ANSI (American National Standards Institute) – Z97.1

NOTE: Manufacturers' Specifications and Testing Reports are available upon request

Glass Protection Solutions only installs Security Film for Blast Mitigation based on Architectural or Engineering Specifications.
